Director, TCM-Live

Welcome to the Live Training Community portal, where we develop, support and communicate our Live Training initiatives for the Army. Our intent is to facilitate communication with developers, users, and our industry partners to support standards and common solutions for Live Training. Our goal is to reduce total ownership costs while improving quality, interoperability, and reusability across Live, Virtual, Constructive, and Joint training/test domains for our Soldiers, our joint Services partners, and the Nation.

# Army Mobile Instrumented Training System (AMITS)

## Description/Summary of Program Requirements

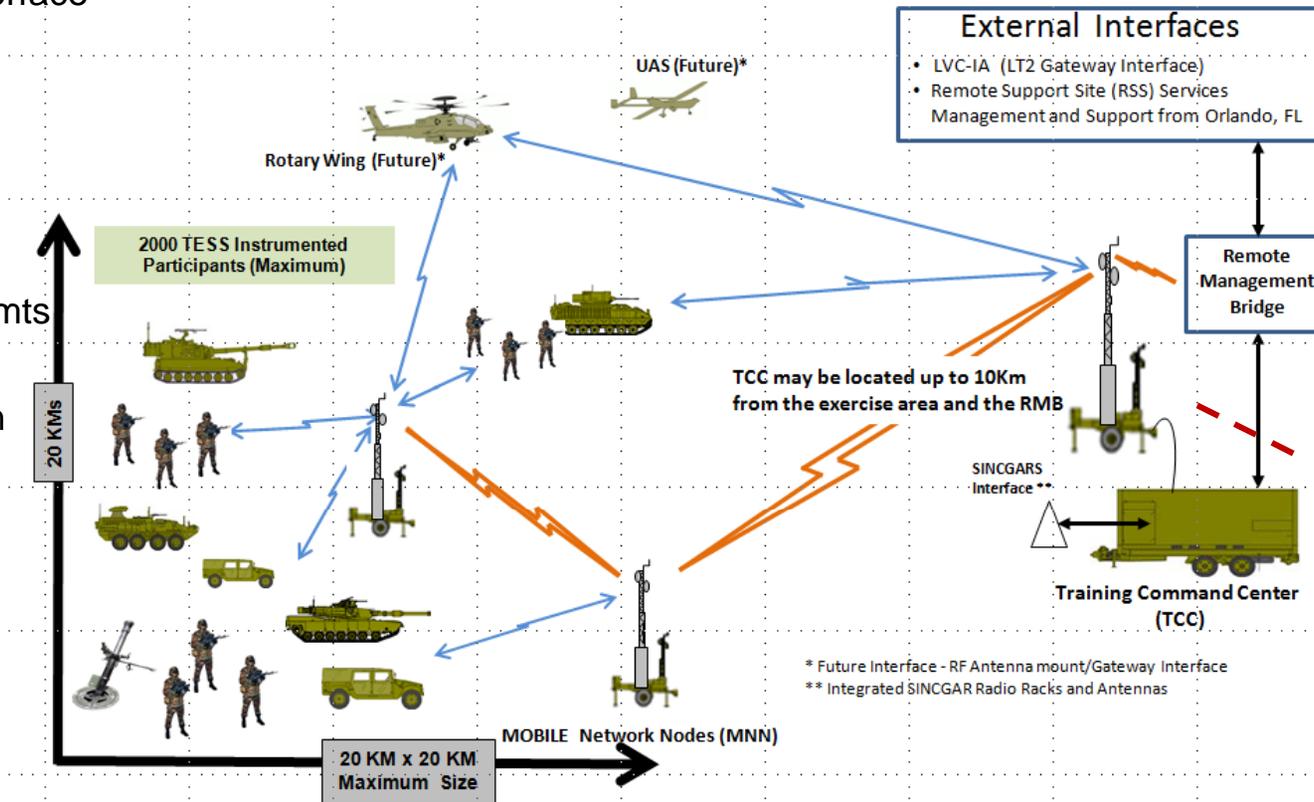

PEO STRI Project Manager for Training Devices (PM TRADE) has a requirement to procure up to nineteen (19) Army Mobile Instrumented Training Systems (AMITS) at a fielding rate of one per quarter beginning in 4Q14 and ending in 4Q18. The AMITS, with existing TESS and future TESS, will provide the end-to-end Home Station Training Capability in a mobile configuration. AMITS consists of a mobile instrumentation control center with AAR capability, a bi directional communications network between the vehicles and soldiers equipped with future TESS, and has the capability for remote configuration management updates. Future indirect fire pairings will rely on AMITS to complete player RTCA pairings and not the MILES laser. OCONUS sites include Hawaii, Alaska, Germany, and Korea. PM TRADE will not fund any development under the initial effort.

## AMITS Functional Architecture

## Description/Summary of Program Requirements

PM TRADE has a tentative requirement to modernize JMRC voice, data and video infrastructure and components to satisfy current and future force training requirements. The requirements will likely be very similar to the CTC-IS requirements.

# One Tactical Engagement Simulation System (OneTESS)

## Description/Summary of Program Requirements

Mission –OneTESS, Increment 1, will provide a live, precision, combined arms Indirect Fire (IDF) Force-on-Force training capability for the IBCT (dismounted) mortars (60mm/81mm/120mm) and Forward Observer at Brigade and below exercises, at Home Station, Combat Maneuver Training Centers and deployed sites and will be interoperable with I-MILES laser based systems. It will provide realistic, real-time casualty effects for indirect fire tactical engagements, automated casualty/maintenance assessment, and the ability to integrate into training instrumentation systems such as the Homestation Instrumentation System (HITS) and the Combat Training Center-Instrumentation System (CTC-IS).

## Description/Summary of Program Requirements

Mission – C-IED FoS will provide a brigade and below exercise live Force-on-Force training capability for Spider Networked Munitions, Husky Mounted Detection System Surrogate (HMDSS), and Enemy Area Denial Systems at Home Station, Combat Maneuver Training Centers, and deployed sites.

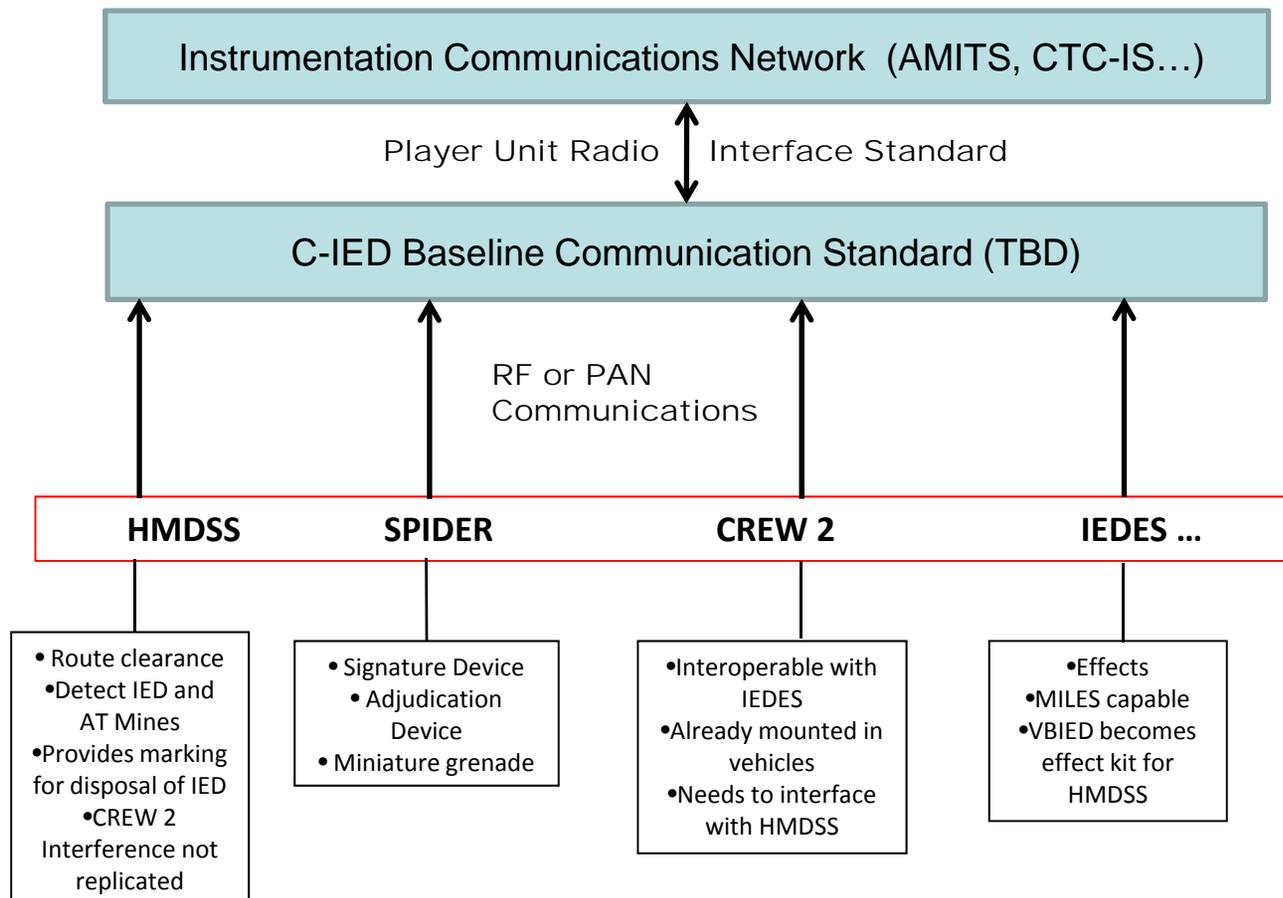

C-IED FoS will provide the ability to integrate into training instrumentation systems such as the Homestation Instrumentation Training System (HITS), Combat Training Center-Instrumentation System (CTC-IS), and interoperable with I-MILES and Improved Explosive Device Effects Simulator (IEDES).

# Target Modernization Common Armor Target Silhouette Development

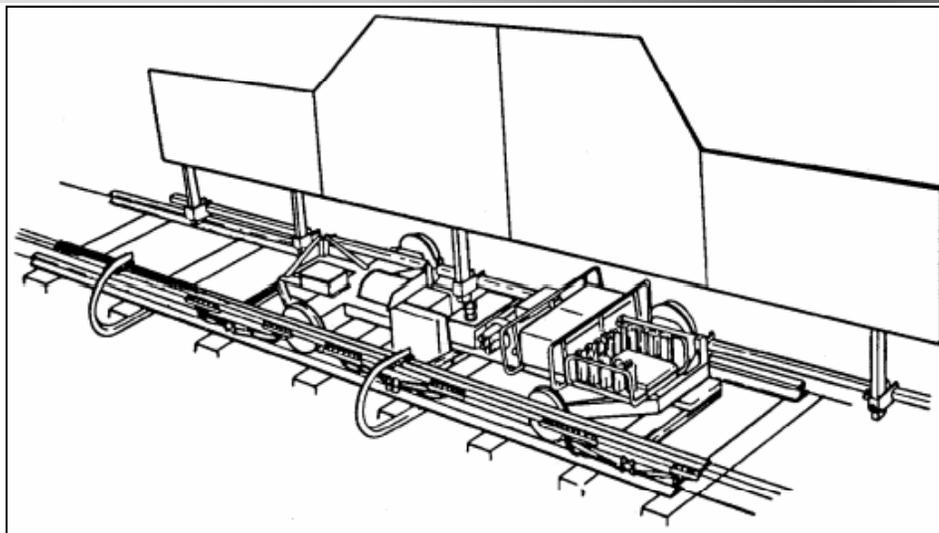

## Description/Summary of Program Requirements

The Common Armor Target Silhouette will be designed and developed to create a family of standard armor silhouettes usable on all live fire training ranges, allowing for the creation of a National Stock Number to support ordering and resupply, and to reduce the overall weight of the armor silhouettes. The aim will focus on the manufacturing, replication, recycling, durability, and ability to support current Combat Identification (CID) technologies. This effort will develop only a limited number of target silhouettes. If the concept/technologies prove viable, additional silhouettes will be developed. All silhouette parameters are defined within TC 25-8.

This effort was delayed to support a detailed Cost Benefit Analysis in conjunction with PM ITTS to validate/quantify the life cycle cost avoidances to be realized via the change in silhouette materials.

# Target Modernization Common Armor Target Silhouette Development

- The CATS silhouettes geometry and profiles will meet the defined standards in TC 25-8
- There are no expected modifications to be made to the lifting devices to support the CATS silhouettes other than the holding clamps

- The CATS silhouettes will support the ROC-V/CID overlays and thermal overlays

**■ THERMAL MODULE PLACEMENT**

# Target Modernization Range 211 and Malone 2 Upgrades

## Description/Summary of Program Requirements

Range 211 in Grafenwoehr Germany is a legacy ERETS range, consisting of 19 Stationary Armor Targets (SATs), 103 Stationary Infantry Targets (SITs), and 3 Moving Armor Targets (MATs). The range will be upgraded with FASIT targets employing a DSL network over the existing ERETS infrastructure. Additional upgrades may be required for the MATs (rails, docking station, RF communication, etc). No upgrade will be required to the Range Control System, currently TRACR, though network connections between the DSL and TRACR will be required.

Malone 2 at Fort Benning is a legacy LOMAH range, consisting of 32 lanes of targets, with targets at 75m, 175m, and 300m (for a total of 96 SITs/LOMAH positions). The range will be upgraded with FASIT targets, FASIT ICD compliant LOMAH bars, FASIT ICD compliant shot sensors, and FASIT/TRACR compliant student stations. Upgrade will be implemented via a DSL network over the exiting infrastructure. No upgrade will be required to the Range Control System under this contract.

## Description/Summary of Program Requirements

The CPM Next contract is to continue the managed evolution of the LT2 product line (P/L) and provide total life-cycle support to product managers within the LT2 P/L. The CPM Next contract will continue to meet the requirement for a consolidated streamlined approach that protects and leverages the Army's LT2 P/L investment, continues to evolve the core assets, architectural frameworks, and the LT2 P/L construct while continuing to provide PM TRADE an efficient, effective and agile method to accomplish:

- Management, maintenance, and evolution of the LT2 P/L products, processes and core assets
- Total life-cycle system management P/L support of systems/products within the LT2 P/L family of training systems
- P/L support of systems/products that leverage LT2 P/L assets
- Support of external interoperability initiatives such as LVC-ITE, Joint and Foreign Military Sales
- Synchronization with the Warfighter FOCUS (WFF) contract
