Don't Miss the Unique Opportunity to See the Army's Latest and Greatest Training Devices

Visit the U.S. Army Program Executive Office for Simulation, Training and Instrumentation (PEO STRI) in Booths 901 and 921 at the National Guard Association of the United States conference Sept. 11-13 at the Gaylord Opryland Convention Center in Nashville, Tenn.

Explore Virtual MRAP Driver Training

The Common Driver Trainer allows Soldiers to experience critical driver tasks that are too dangerous or infrequently trained in the live training environment. Some of the dangerous situations that Soldiers are currently encountering in theater that this trainer takes into consideration are bad driving conditions like dilapidated roads and weak bridges, combat

conditions like roadside bombs or ambushes, and mere driver error.

See the New Age of Mission Planning

The Tactical Digital Hologram (TDH) provides an accurate 3D representation of the battlefield. Soldiers are currently using the TDH to fight insurgents in environments that have tall buildings or subterranean bunkers and caves, for example. The entire unit can stand around the hologram to quickly prepare for building clearing procedures, cordon and search missions, vehicle positioning, indirect fire support, and so on.

Try Out Small Arms Weapon Instruction

Perhaps the Army's most

popular training device, the Engagement Skills Trainer 2000 offers Soldiers marksmanship training in shoot, don't-shoot scenarios. The Sergeant Major of the Army recently requested to use the device in the Army's Best Warrior Competition. Furthermore, all of the military services, other federal, state and local law enforcement agencies, and even foreign defense forces use the EST 2000.

Check Out the Vehicle Evacuation Exercises

The Mine Resistant Ambush Protected (MRAP) vehicle Egress Assistance Trainer (MET) properly trains Soldiers to get out of a rolled-over MRAP vehicle. PEO STRI proudly worked in close collaboration with many other Army components to rap-

idly produce the device, which proves to be an Army solution for an Army problem. The trainer is helping Warfighters to overcome a danger they are facing in the combat zone.

Get an Education in Combat Casualty Care

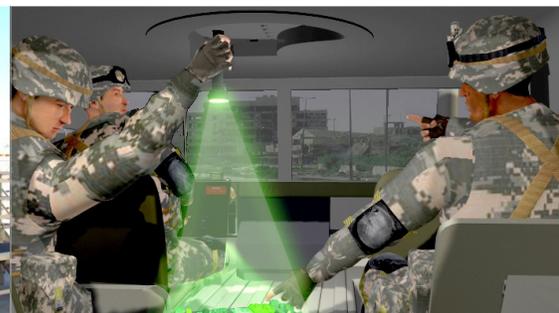

Operational needs prompted the rapid fielding of the Medical Simulation Training Centers (MSTC). The state-of-the-art facilities teach Soldiers basic combat casualty care in a classroom and simulated battlefield environment. The instruction trains Soldiers on preventable combat deaths so that all Soldiers are also first-responders. The relatively new training has quickly permeated throughout the Army due to the importance of the instruction. ■
