# OneSAF Business Model

Yearly sources for requirements and new capabilities flow into the software baseline.

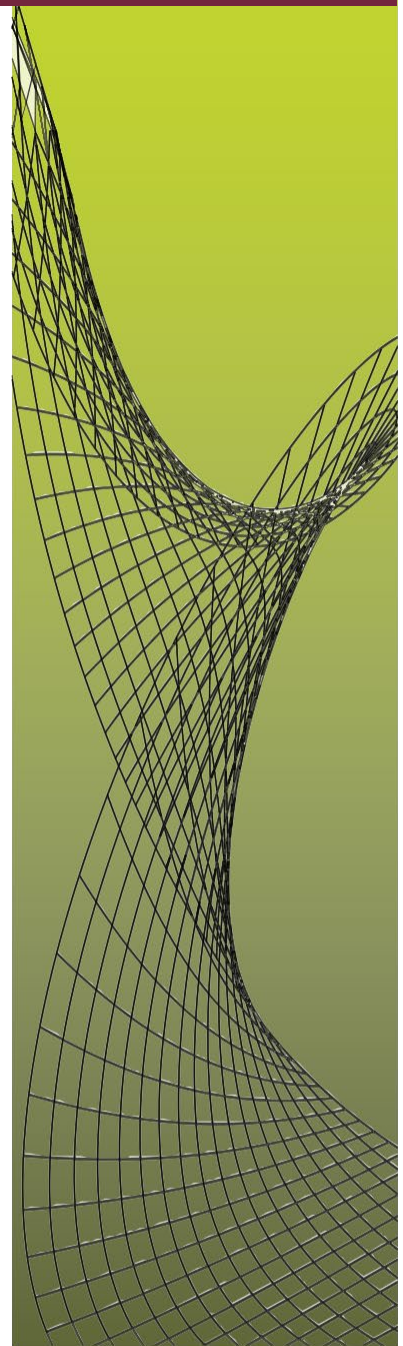

- ► Government-owned, open-source software; Government retains all software rights
- ► Government acts as the Lead System Integrator
- ► Requirements Prioritization Process with participation of M&S communities
- ► Product line approach:
  - • Provide a configurable software architecture that enables third party (co-developer process) customization
  - • Allow user community to modify, create, or extend models and behaviors, performance data, entities and units, and tools
- ► Standards-based software development; implements DoD/Industry-based standards
- ► Centralized Configuration Management
- ► Centralized development location; Government and contractors are co-located, executing as one Integrated Product Team
- ► Controlled software distribution; Distribution Agreement requires recipients to share software enhancements with APM OneSAF for integration and distribution
- ► Minimize/eliminate duplication of efforts — Build once, reuse often!!

- ► Customer focused:
  - • Training – Start on the right path
  - • Communications – We are here to help!
  - • Development – Stay on track
